Future plans for Dplug in the age of AI

Did I overreact?

Meeting
Oct 20th 2026

New in Dplug and D

The

`filesystem`

DUB package

Not yet shipped in a plug-in, but it should work.

https://github.com/p0nce/filesystem

Features

- `@nogc`
- POSIX, macOS, Windows.
- Path manipulation with the `Path` struct type.
  - `Path.native().toUTF16().ptr` can be used in Win32 functions.
  - `Path.native().ptr` can be used in POSIX functions that accept zero-terminated UTF-8.
- File type.
- File size, in bytes.
- File last write time, in seconds.
- File copy, rename, and removal.
- Recursive directory creation, listing and deletion.
- Disc usage information.
- Get and set environment variables.
- Getting standard paths, such as app data, XDG config (fork of `standardpaths` and `xdgpaths`

Luna forked LDC

Luna 🦊🇩🇰
@lunafoxgirlvt.foxgirls.gay

I've decided, I will be making my internal DLang fork public. It is based on LDC2 and will have a strict no-AI policy. Unless there's significant interest the changes to the language will be minimal and just be bug fixes and toolchain updates. 1/3

- Like a feature freeze at D 2.111 / LDC 1.41
- no AI policy

Let's talk about PR #950

Expose host offline-render state to plugins (bounce/export/freeze) #950

Closed magicjase11 wants to merge 12 commits into AuburnSounds:master from magicjase11:pr-offline-render-state

Conversation 3 · Commits 12 · Checks 0 · Files changed 10

magicjase11 commented last week

Implements what #949 describes: `Client.isOfflineRendering()` and `TimeInfo.offline`, so plugins can switch to more expensive processing when the host renders offline (bounce/export/freeze) and stay cheap during realtime playback.

Per-format wiring:

- **VST3:** `setupProcessing` reads `setup.processMode == kOffline`; `process` re-reads `data.processMode` per block, since hosts may switch modes without calling `setupProcessing` again.
- **CLAP:** implements the `clap.render` extension (`set` maps `CLAP_RENDER_OFFLINE` / `CLAP_RENDER_REALTIME`; `has_hard_realtime_requirement` returns `false`).
- **VST2:** `audioMasterGetCurrentProcessLevel` polled per block; `kVstProcessLevelOffline` (4) means offline, unknown level (0) is treated as realtime.

document the no-reset decision for offline state changes e32620c

Patterns of contribution

AI code is now banned for Dplug contributors

1. Because it's disrespectful when you send a robot.

2. Like debt and commerce, merging code is an occasion to speak to about each other.

Thanks for your understanding.

What makes a community?

What makes a community?

Are the things that make people gather preserved in the age of AI?

Anti-social interaction (vs pro-social)

I've been keeping it pretty quiet and nobody really caught it when I mentioned it in a monthly meeting recently.

I have my own language now :)

With optimizing backend, including aarch64 support.

Fully LLM written.

The issue as I see it

- Now anyway can almost do anything
- Little reason to collaborate or care about each other, you just need Claude!
- Dangerous for open source projects since **there is always a shiny bright opportunity for everyone involved.**

Example: IPlug2 => IPlug3

Over these years, iPlug2 powered an impressive range of commercial and open-source plug-ins: Full Bucket Music's 30+ vintage synth emulations, Surreal Machines' Impact/Modnetic/Diffuse, Forever 89's Visco and Topos, the Neural Amp Modeler, and many more.

iPlug3 carries forward this legacy while embracing the tools and workflows of today head-on. It's a greenfield implementation—despite the name (which may change). It is not designed for backwards compatibility with iPlug2 and iPlug1 projects.

Why the term « Anomie » kinda fits

In sociology, **anomie** or **anomy** (/ˈænəmi/) is a social condition defined by an uprooting or breakdown of any moral values, standards, or guidance for individuals to follow.[1]

Source: https://en.wikipedia.org/wiki/Anomie

"Respect for work done" is one of the norm that is being challenged.

Why the term « Anomie » kinda fits

Durkheim described *anomie* as "derangement", and "an insatiable will." Durkheim used the phrase "the malady of the infinite" because desire without limit can never be fulfilled; it only becomes more intense.

AI coding pros and cons in general

- **Pros:** can do a lot more with lot more confusion
- **Pros:** is good thinking of many aspect of a problem
- **Pros:** subsidized (for now)
- **Pros:** unnatural abilities
- **Pros:** will happen anyway, maybe not immediately

- **Cons:** sick of reading Claude output
- **Cons:** I prefer talking with humans
- **Cons:** Quality doom loops in organization, the vibe takes over
- **Cons: Clearly does something to mental health and intrinsic motivation**
- **Cons: Clearly does something to our inter-dependency**
- **Cons: less happy, more divergent work**

Mood swings as noticed by a DConf'26 speaker

Future plans for Dplug

- Largely continuing in the same way to avoid intense mental anguish
- Maybe using AI for code review and bug finding, not generation.
- Do not become “more ambitious”
